

## **I. Amendments to the Specification**

Please replace previously presented paragraph **[0043]** with the following amended paragraph:

**[0043]** The rolled-up air-bag 2 has been encased within a sleeve or housing 39 as best seen in Figure 3. The mounting tabs 14 extend through apertures 45 (schematically shown for illustrative purposes only) formed in the upper side edge of the sleeve or housing 39, such that the mounting tabs 14 protrude from the sleeve or housing 39 and the straps 34 and 36 extend through apertures [[45]] formed in the ends of the sleeve or housing 39 such that the straps 34 and 36 protrude from the sleeve or housing 39. The air-bag 2 is connected to a gas generator 24 which is located within the roof lining of the vehicle. The gas generator is connected to a collision and roll-over sensor 26.

Specifically, paragraph **[0043]** was amended by deleting “45” from line 5. This amendment was in response to an objection that “45” should be deleted from line 5 of paragraph **[0043]**. Accordingly, Applicants believe that this amendment has cured the respective object.
